

- A
- (a) receiving at the gateway a request from the client for the desired resource and redirecting the request to the access controlling server;
 - (b) receiving at the gateway a permission notification from the access controlling server; and
 - (c) controlling access of the client machine to the desired resource based on the content of the permission notification received from the access controlling server.
-

REMARKS

In this application, claims 1-32 were previously pending. By way of this amendment, claim 33 is added. A copy of all claims as currently pending is attached at Appendix A. Claims 1-6, 8-13, 15-22, 24-29, 31 and 32 have been rejected under 35 U.S.C. § 102(e) as anticipated by U.S. Patent No. 6,389,462 to Cohen et al. ("*Cohen*"). Claims 7, 14, 23, and 30 stand rejected under § 103 as obvious in view of *Cohen*, further in view of U.S. Patent No. 6,012,090 to Chung et al. ("*Chung*"). Applicants respectfully submit that the previously pending claims are patentable over *Cohen* for the reasons set forth hereinafter, and accordingly request reconsideration and withdrawal of the pending rejections. Moreover, Applicants believe that new claim 33 is patentable over *Cohen* as well since *Cohen* does not teach the recited combination of elements.

It will be appreciated that in order for a reference to anticipate a claim, that reference must teach, expressly or inherently, each and every element of that claim. If the reference fails to teach even one element, it cannot as a legal matter anticipate the targeted claim. It is respectfully submitted that the *Cohen* reference fails to teach many elements of each claim. In
